

ABSTRACT

EVENT PLANNER TIMEPIECE

The present invention relates to an electronic timepiece, of the wristwatch type, for providing information relating to an event comprising a plurality of scheduled events, like for example the Olympic Games, the football World Cup, or the public holidays across the world. The timepiece includes in particular a control circuit

5 comprising storage means in which there is stored data relating to the scheduling of the plurality of scheduled events and comparison means for comparing the data stored with a time-related piece of information, the control circuit activating indicator means for designating one or more events in response to a control signal from comparison means.
